

Phase 6: User Interface Development

Phase 6 of the TalentBridge project focuses on designing and implementing an **intuitive, responsive, and visually appealing user interface** for both HR and candidate users, leveraging **Lightning Web Components (LWCs)** and modern Salesforce UI practices.

Lightning Web Components (LWCs):

Custom LWCs were developed to provide streamlined access to core functionalities:

1. **talentBridgeLWC:** Central dashboard displaying key performance indicators (KPIs) such as total Jobs, Applications, and Candidates, along with trends and statistics.
2. **applicationManagement:** Allows recruiters and HR to manage candidate applications efficiently.
3. **onboardingManagement:** Facilitates handling of onboarding tasks using dynamic picklists and status updates.
4. **interviewScheduling:** Enables scheduling and management of interviews, including date, time, and interviewer selection.
5. **offerManagement:** Supports generation and sending of offer letters, with status tracking for each candidate.

UI Enhancements and Styling:

- **Styled KPI Cards:** Color-coded highlights for quick insights into recruitment metrics.

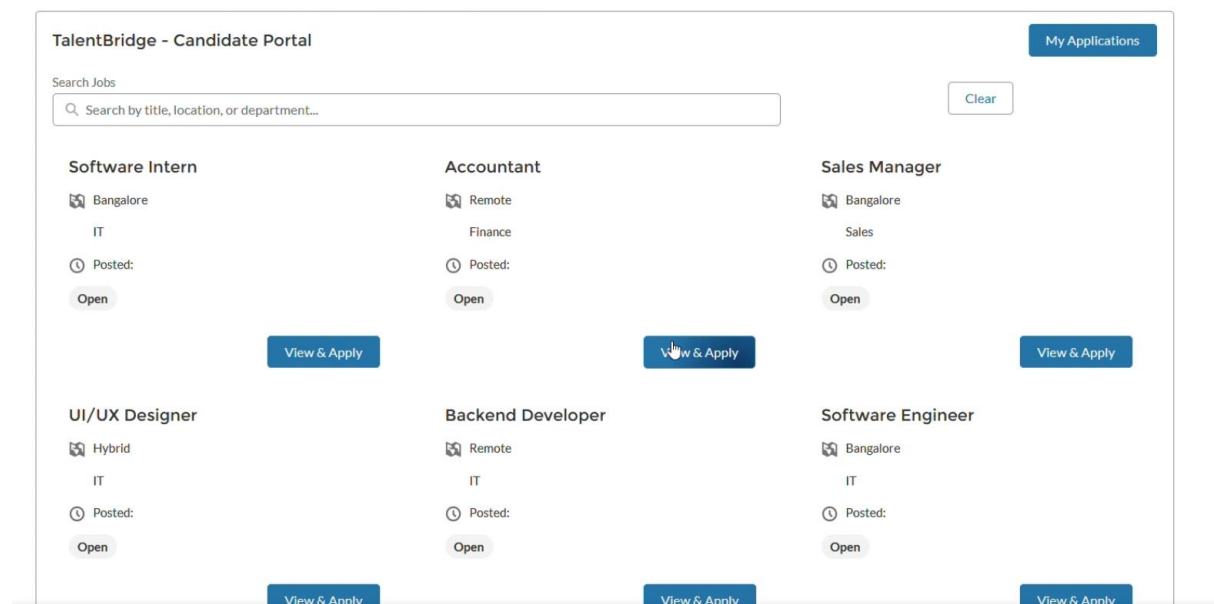

- **Responsive Grid Layout:** Utilized Salesforce Lightning Design System (SLDS) to ensure responsiveness across devices.
- **DataTables:** Interactive tables for displaying job listings, candidate applications, and other tabular trends for easy management.
- **CSS Customizations:** Applied custom CSS for the Candidate Portal and TalentBridgeLWC to enhance aesthetics and maintain consistent branding.

Experience Cloud Integration:

- Both **HR Portal** and **Candidate Portal** were developed using LWCs embedded within Salesforce Experience Cloud, providing **role-based, secure access** and a seamless user experience.
- Portals enable users to perform tasks relevant to their roles, while maintaining a clean and modern interface.

This phase ensures that the **TalentBridge application is user-friendly, visually engaging, and fully responsive**, enhancing productivity for HR teams and providing an intuitive experience for candidates interacting with the platform.
